

Credit Name: CSE 2nd Language Programming Credit
Assignment Name: #10 Order Assignment

Describe the errors you've encountered while working on this assignment. What caused the error and how do you overcome the error?

The errors I've encountered was adding the subtotal, total, and the total with tax and what caused the error was forgetting a variable to format the value. I overcame this issue by searching up the solution in google and finding that I had to use string.format to display the prices.

```
// Output: Display the total, tax, and final cost
System.out.println("Total before tax: $" + String.format("%.2f", subtotal));
System.out.println("Tax (6.5%): $" + String.format("%.2f", tax));
System.out.println("Final cost: $" + String.format("%.2f", totalCost));
```
