Credit Name: CSE 2nd Language Programming Credit
Assignment Name: #12 Spending Assignment

Describe the errors you've encountered while working on this assignment. What caused the error and how do you overcome the error?

I've encountered an error while trying to compare the two variable's values to see if the user has guessed the same number as the secret number generated by the computer and what caused the error was a mistake in the code structure that violated the rules of the Java language. How I overcame this error was to search for the correct structure in google and instead of "=", it's "==".

```java
// Step 4 and 5: Check if the player's number matches the secret number
if (playerNumber = secretNumber) {
    System.out.println("You Won!");
} else {
    System.out.println("Better luck next time.");
}
```
